- water and sewage systems
- investor's supervision
- digital and offset printing
- professional hardware and software, including: Leica DS2000 georadar, GLS-2000L stationary scanner, drones (airframes and rotors)
- 1st degree industrial security certificate

We invite you to cooperate, we guarantee quality in the performance of works.

Please submit inquiries to the following address: biuro@geokart.com.pl

Geokart-International Sp. z o.o. has been operating in the geodetic industry since 1989. We have gained extensive experience by executing orders of the State Treasury, Provinces or Districts, including: geodetic control networks, numerical databases, modernization of land and building records, maps for design purposes and many others, by designing infrastructure and operating in the printing industry. This is possible thanks to the authorization to prepare official thematic: hydrographic and sozological maps, issued by the Chief Surveyor of the country, high-quality hardware and software, as well as high qualifications of our employees.

At the request of municipalities, municipal companies, water and sewage companies and Regional Infrastructure Boards, we design water supply and sanitary sewage systems, sewage treatment plants and provide investor supervision over implemented projects.

We have an Offset and Digital Printing House where we deal with digital and offset printing, numbering and bookbinding. We cooperate in the printing of maps, albums, books, brochures, calendars, leaflets, and various types of prints with Province Offices, Electoral Delegations, Museums, Publishers, companies and advertising studios.

The First Degree Industrial Safety Certificate up to the SECRET clause allows us to perform orders where having it is a necessary condition.

We also have a team with extensive experience in the largest construction contracts commissioned by PKP PLK, General Directorate for National Roads and Motorways or private ordering parties.

Qualified staff with professional qualifications to implement construction designs, including modernization, revitalization of railway lines, reconstruction of large railway stations, construction of expressways (motorways, ring roads, provincial roads), engineering facilities, or works related to the construction of halls, industrial facilities, power lines, gas and heating networks in shopping malls are guaranteed high quality of commissioned work.

Under the new management, we have become a leading company in works related to geodetic investment management, preparation of maps for design purposes for investments and coordination of the entire construction process related to geodetic works.

Geokart-International Sp. z o.o. Offset and Digital Printing House

From the very beginning, our printing house focuses on **high print quality and comprehensive customer service**. We have our own graphic studio, where we design and print all advertising materials and cartographic publications **in any circulation**.

We try to meet the expectations of customers by offering a wide range of maps, books, magazines, catalogs, through forms, brochures, guides, advertising leaflets, folders, business cards, binders and various calendars, etc.

We have the possibility of making **various types of print refinements**, from foiling, spot varnish, to embossing, dies, decorative papers and many others, depending on the tastes of customers. **Hardcover** is also our speciality. As one of the few printing houses in Podkarpackie Region, we have the full **B1** printing format.

We try to look for unconventional design and technological solutions, thanks to which our works are attractive, original and meet the intended goals. Thanks to our offer, quality and speed of implementation, **many companies from all over Poland have trusted us**.

The printing house is equipped with offset machines and many accompanying and bookbinding machines and devices, incl. **hardcover station**. Our machine park also includes digital printing devices:

- Xerox® Versant® 280 Digital Manufacturing System offering high performance. It ensures high quality color printing. It is also equipped with a set with replaceable toners for printing using **gold, silver, white and colorless toner**.
- Laser printers capable of printing in color.
- Advanced Xerox® PrimeLink® production system for black and white printing.
- Plotters, including Canon ImagePROGRAF offering prints from a roll with a width of 1067 mm.
- The 11-ink EPSON Stylus Pro 4900 printer ensures accurate color reproduction and high-quality prints.

Our machines can print on offset, chalky and decorative papers as well as cardboard with various grammages. **The equipment is constantly modernized** to meet the highest requirements of our customers.

As a printing house, we also meet the requirements entitling us to participate in **public procurement**.
